**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-6~~6~~ are allowed.
2. The following is an examiner's statement of reasons for allowance:
  - a. Applicant discloses an invention that provides DRM (Digital Rights Management) software, distribution methods, and arrangements that are designed to protect software, content (e.g., music, video, books, etc.), and other digital goods. Applicant's invention is novel and innovative in the sense that it provide converting the initial digital good into a modified digital good using the unique key data to selectively individualize the initial digital good for use with the computer, such that the plurality of selectively arranged parts in the modified digital good have been rearranged to have a substantially unique operative configuration that properly functions with the computer and is different than the initial configuration, and causing the at least one computer to run the modified digital good. Maytal (U.S. Patent No 6,715,079) the closest to prior art teaches a system for transmitting a key for soft modem software protection over a serial bus of a computer having a CPU and a hardware device. The serial bus has designated time slots. The system includes a storage unit in the hardware device for storing a representation of the key therein, and means for transmitting the representation from the hardware device to the CPU over at least one of the designated time slots. Maytal fail to teach or suggest converting the initial digital good into a modified digital good using the unique key data to selectively individualize the initial digital good for use with the
